

# Consulting & Evaluation Services

Solidstate Controls, Inc. (SCI) offers the services of consulting engineers for a variety of on-site consultations and site surveys. Our engineers have expertise in the many aspects of providing the continuity of electrical power. Consultations may consist of an evaluation of existing and/or proposed new equipment. No matter what your power-related problem involves, from heating and cooling, physical size requirements, to battery installation analysis, SCI has the expertise on staff to help.

## S E R V I C E S   A V A I L A B L E

- Total UPS/Power Conditioning Integration
- Installation guidelines
- Load compatibility
- Distribution systems
- Fuse/circuit breaker coordination
- Battery system analysis
- Custom circuit design
- Site specific, custom feedback, etc.

A detailed report will be supplied for all areas discussed and recommendations will be documented along with a proposal to meet the requirements. This service is custom designed to assist our clients in solving their power problems and create the most economical long-term results.

Pre-planning is the first step in purchasing equipment. Our representative(s) can help our clients evaluate current and future needs, and outline foundation work that will be economical for future growth.
